

A Step Change in Modern Microscopy

Axio Zoom.V16 a modern tool for life and physical sciences

The Axio Zoom.V16 defines a step change in modern microscopy further blurring the line between traditional stereo and compound microscope applications. Optically, the system provides a higher numerical aperture (NA) across its zoom range compared to conventional stereo microscopes. This higher NA has benefits in increased light efficiency for fluorescence imaging. Improved resolution benefits screening and large area applications across life science, physical science and engineering.
